GitHub: <https://github.com/paras245> Phone: +971 502 877 414

Visa: UAE Residence Visa Available: Immediately

PROFILE SUMMARY

Results-driven Junior Software Developer with **2.5+ years** of hands-on experience building scalable, production-ready enterprise web applications. Core expertise in **.NET Core 6/8, .NET MVC, Web API and MSSQL Server**. Actively leverages AI development tools (**GitHub Copilot, Claude Code, ChatGPT, Antigravity**) to accelerate delivery and maintain high quality. Immediately available — UAE Residence Visa based in Dubai. Also open to roles in **QA / Software Testing, Admin Support, IT Support, Technical Support, Tech Sales, Digital Content Creation, Web Design, and Social Media Marketing**.

TECHNICAL SKILLS

Languages	C# • JavaScript • TypeScript • Python • Java • HTML5 • CSS3 • SQL
Backend	.NET Core 6/8 • .NET MVC • Web API • .NET Framework • FastAPI • Minimal API
Frontend	Angular 18 • Bootstrap 5 • Tailwind CSS
Databases	MSSQL Server • PostgreSQL • MongoDB
ORM & Data	Entity Framework Core • Dapper • LINQ • Stored Procedures • Views • Triggers
Architecture	RESTful APIs • OOP • SOLID Principles • MVC • JWT Auth • GraphQL • SOAP • Async/Await
Messaging	SignalR • RabbitMQ • Temporal • Background Jobs • Cron
DevOps & Tools	Docker • Git • GitHub • Bitbucket • IIS • CI/CD basics • Swagger • Postman • Power BI • npm • pip • Angular Cli • Dotnet Cli
AI & Dev Tools	GitHub Copilot • Claude Code • ChatGPT • Antigravity • Gemini • Grok • Codex •
Testing & Support	Manual QA • API Testing • Regression Testing • Bug Tracking • UAT Support • Admin Support • IT Support • Technical Support • Tech Sales Support • Jira • MS Office

WORK EXPERIENCE

TechnoBrains Business Solutions Junior Software Developer

Ahmedabad, India
March 2024 – Present

US-based Healthcare Platform — Precise Imaging RadFlow 360 (MRI / XRAY / CT Diagnostic Imaging)

- Architected and delivered RESTful API endpoints using .NET Core 6/8, applying OOP, SOLID principles, JWT-based authentication and authorization, CORS configuration, and async/await patterns for high-throughput scalable workflows.
- Migrated production .NET Core 6 APIs to .NET 8 using the .NET Upgrade AI Assistant, and assisted in upgrading the Angular frontend from v10 to v18, reducing build size and extending the Microsoft

support lifecycle.

- Assisted in the integration of third-party services into the live platform — including QuickBooks, RabbitMQ, Temporal, Bitwarden Secret Manager, Tebra API, Keploy, Entelligence AI, JSDelivr, and NDepend — within a cross-functional Agile team.
- Implemented SignalR real-time notifications for patient record changes, eliminating polling and delivering instant updates across all active user sessions.
- Designed a data normalization strategy using master tables and ID-based lookups, replacing name-based references and improving data consistency across the system.
- Built a secure file upload and folder management system enabling clinical staff to store, browse, and download patient documents directly from the frontend.
- Developed optimized stored procedures, indexed views, triggers, and transactions in MSSQL Server to achieve measurable query performance improvements on high-volume data tables.
- Implemented infinite scrolling in DevExtreme Grid with dynamic record fetching and append logic, improving UX on large patient data sets without page reloads.
- Delivered an automated Cron Job for scheduled daily email workflows, handling payment case tracking notifications for designated users.
- Built an admin user-log module capturing login events including device IP, browser, device info, and authentication method (magic link vs. credentials).
- Wrote NUnit unit tests for .NET Core Web API endpoints to improve code reliability and enable regression testing across key modules.
- Leveraged GitHub Copilot, Claude Code, and ChatGPT throughout the development cycle to accelerate code generation, code reviews, and debugging.

TechnoBrains Business Solutions

Software Trainee

Ahmedabad, India
March 2023 – Feb 2024

- Completed intensive full-stack training in .NET Core, C#, Web API, Angular, and MSSQL Server.
- Delivered end-to-end sample applications covering API development, Angular UI integration, and relational database design.
- Collaborated using Git-based version control workflows and Agile development practices.

KEY INDUSTRY PROJECTS

- **Precise RadFlow 360** — US-based cloud diagnostic imaging platform (MRI, XRAY, CT) serving clinical centres | TechnoBrains Business Solutions
- **Lizmontagens India Pvt. Ltd** — Enterprise ERP & Material Flow management system
- **Flagship Biotech International Pvt. Ltd** — Dossier Document Management System & HRMS
- **Pragati Electricals** — End-to-end ERP system for electrical business operations

EDUCATION

Bachelor of Computer Science
Satish Pradhan Dnyanasadhana College

LANGUAGES SPOKEN

- English — Professional Proficiency
- Hindi — Native
- Gujarati — Native
- Marathi — Conversational
